DESKRIPSI

Sistem presensi berbasis pengenalan wajah menggunakan metode hybrid feature extraction digunakan sebagai aplikasi sistem presensi kehadiran. Presensi kehadiran digunakan untuk mendeteksi dan mengenali identitas seseorang dan kemudian disimpan sebagai basis data wajah. Sistem presensi kehadiran berbasis wajah yang dikembangkan pada penelitian ini adalah sistem presensi wajah menggunakan metode hybrid feature extraction. Metode ini merupakan sebuah pengembangan metode baru yang menggabungkan beberapa metode ekstraksi fitur dengan melakukan beberapa pembobotan pada setiap metode sehingga dapat dihasilkan sebuah metode ekstraksi fitur baru yang lebih akurat. Sistem presensi wajah ini diimplementasikan menggunakan arsitektur client-server yang diintegrasikan pada jaringan komputer. Model arsitektur server-client pada jaringan komputer ini bisa digunakan untuk mesin presensi wajah yang dapat diakses secara intranet maupun via online menggunakan internet. Sistem presensi wajah menggunakan kamera ini sangat aman dan akurat untuk mendeteksi user karena memiliki proses data yang lebih akurat dan ketelitian tinggi, sehingga dapat menghasilkan sebuah sistem yang handal dan kuat untuk mengidentifikasi wajah manusia. Penelitian presensi wajah ini dapat dimanfaatkan untuk model presensi wajah yang bisa menghasilkan data presensi yang dapat diakses secara online, realtime dan dapat digunakan pada tempat yang berbeda.

SPESIFIKASI CIPTAAN

1. Software menggunakan Bahasa pemrograman C++
2. Software implementasi menggunakan tool Open Computer Vision V.1.4.3
3. Peripheral menggunakan Dual Vision Camera dan VGA Camera
4. Software Sistem Presensi Wajah dapat digunakan hingga 250 database wajah
5. Software sistem presensi wajah dapat digunakan secara real-time dengan waktu pengujian
